

Blu-Ray Setup Guide

Blu-Ray playback is available on your new computer using the included disc containing Cyberlink PowerDVD software. To install, insert the disc and follow the on screen instructions. The bundled version only has stereo sound, and is not integrated with media center. An upgrade is available for an additional fee through Cyberlink.

To watch a Blu-Ray disc open the PowerDVD software from the shortcut on the desktop.

To return to Media Center, press the green button on the remote, or select the green Media Center icon in the Start menu.
